A Lead Screw Linear Actuator

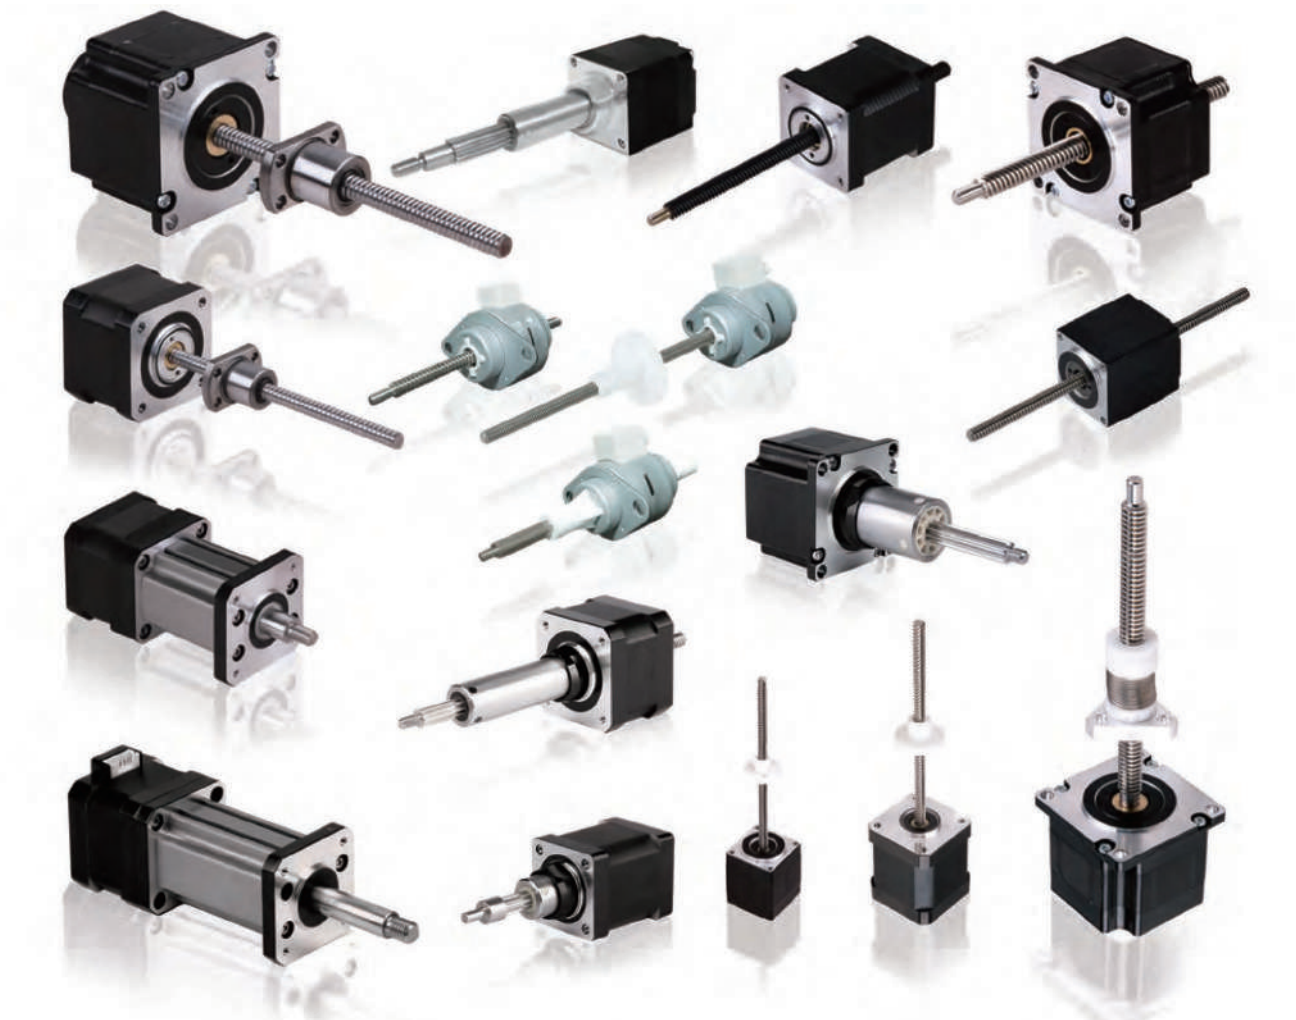
DINGS' offers a comprehensive range of Lead Screw Linear Actuators designed for equipment requiring high performance and long-term durability in compact form factors.

These actuators convert motor rotary motion directly into linear motion through an integrated internal mechanism, reducing the need for external components such as belts, gears, racks, or couplings. This simplifies system design, reduces cost and assembly time, and minimizes precision loss—resulting in improved space efficiency and positioning accuracy.

Compact, quiet, and efficient, DINGS' Lead Screw Linear Actuators are ideal for applications requiring precise positioning, fast response, and high durability. They support strokes up to 500 mm, a minimum step resolution of 0.0015 mm, and maximum load capacities exceeding 200 kgf.

Typical applications include X-Y positioning tables, medical devices, semiconductor equipment, and industrial automation systems. Customization options such as IP-rated protection, brakes, encoders, ball screw configurations, and hollow shaft designs are available to meet diverse application requirements.



Stepper Lead Screw Linear Actuator

DINGS' Lead Screw Stepper Motor Linear Actuators are available in eight frame sizes, ranging from 14 mm (NEMA 6) to 86 mm (NEMA 34). The product lineup includes four configurations—External, Non-Captive, Electric Cylinder (Captive), and Kaptive—allowing flexible adaptation to a wide range of application environments.
These actuators offer travel distances per step from 0.0015 mm (0.00006 in) to 0.127 mm (0.005 in), and even finer positioning control can be achieved when used with microstepping drives. Maximum thrust reaches up to 2,400 N. Encoder options are available across the entire series, along with additional options such as brakes, Teflon coating, and manual knobs to meet specific application requirements.

Product Selection Guide

To reduce complexity and cost of a design, it is important to accurately size a motor / lead screw combination. Below are a few simple steps in selecting the necessary components for a given application.

STEP 1 – CHOOSING A MOTOR SIZE (FORCE REQUIREMENTS)

Here is a general overview of the output thrust vs. motor size:

	Motor Sizes (mm)	Max Thrust (N)	Recommended Load Limit (N)
Lead Screw Linear Actuators	14	19	15
	20	70	45
	28	150	140
	35	300	230
	42	600	230
	57	1300	910
	60	1560	910
	86	2400	2270

As the size of the motor increases, the output thrust of the motor correspondingly increases.

STEP 2 – CHOOSING A SCREW LEAD (FORCE AND SPEED REQUIREMENTS)

After estimating the required thrust and choosing a motor size that may fit your application, the speed and acceleration of the load must be considered and evaluated to choose an appropriate screw lead.

Due to the nature of lead screws, the output speed and output thrust achievable by a motor/lead screw combination are inversely proportional. (i.e., increasing the required thrust will lower the achievable speed for a motor/lead screw combination). As speed increases, the available thrust decreases.

For detailed motor/lead screw selection data, please refer to the speed vs. thrust curves for each motor size.

Although these two steps provide a solid foundation in motor/lead screw selection, other variables must also be considered:

- Duty Cycle
- Desired Life of a System
- Environmental Considerations
- Positional Repeatability
- Acceptable Backlash
- Acceleration/Deceleration
- Driver Specifications
- Vertical or Horizontal Orientation

Because numerous variables must be considered during motor selection, it is highly recommended for users to proceed with physical testing to accurately determine the motor/lead screw combination required for a given application.

NOTE : Although this section aims to provide a rough guideline to select a motor/lead screw combination that best fits an application, we recommend to contact our application engineering staff or sales representatives for further assistance with the motor selection process.

Technology Overview

One of the most common methods of moving a load from point A to point B is through linear translation of a motor by a mechanical lead screw and nut. This section provides an overview of the basic principles of lead screw technology prior to selecting the system that is best for your application.

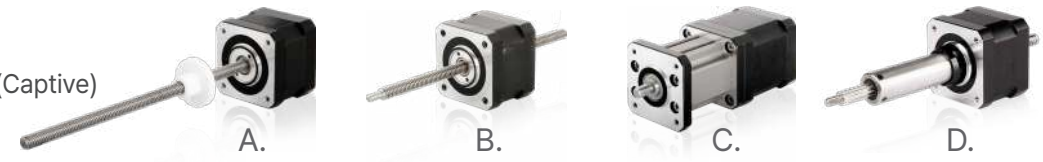
Some basic design considerations are as follows:

1. What is the load of your system?
2. What is the required linear speed?
3. What is the distance to be travelled?
4. What accuracy does your application require?
5. What is the required time to move from point A to point B?
6. What repeatability does your application require?
7. Horizontal vs vertical orientation?

TERMINOLOGY

- **LINEAR ACTUATOR TYPES**

  A. External Linear
  B. Non-captive
  C. Electric Cylinder (Captive)
  D. Kaptive



- **LEAD**

  Lead refers to the linear distance the nut travels axially during one complete revolution of the screw.
  A larger lead increases the linear travel distance per revolution and generally allows higher travel speed.
  Lead is calculated by multiplying the pitch by the number of starts.

- **PITCH**

  Pitch refers to the axial distance between adjacent threads.
  In a single-start screw, the pitch is equal to the lead, while in a multi-start screw the lead is greater than the pitch.
  Multi-start screw designs generally provide higher travel efficiency and smoother power transmission characteristics.

- **ACCURACY OF SCREW**

  Lead screw accuracy refers to the cumulative deviation between the theoretical travel distance and the actual travel distance over a specified reference length.
  For example, a screw with a lead accuracy of 0.004 inch/foot may exhibit a positional deviation of up to ±0.004 inch over one foot of travel. Lead screw accuracy is a critical factor that directly affects the positioning accuracy and repeatability of the overall motion system.

- **POSITION TOLERANCE**

  Position tolerance refers to the deviation between the theoretical target position and the actual traveled position. Position deviation may be affected by the mechanical structure, lead screw accuracy, and assembly condition of the system.

- **REPEATABILITY**

  Repeatability refers to the ability of a system to repeatedly return to the same target position. In most motion control systems, repeatability is often considered more important than absolute positioning accuracy.

- **HORIZONTAL OR VERTICAL APPLICATION**

  In vertical applications, backdriving may occur when motor power is removed or when no braking mechanism is applied. Additional gravitational load conditions should also be considered during system design.

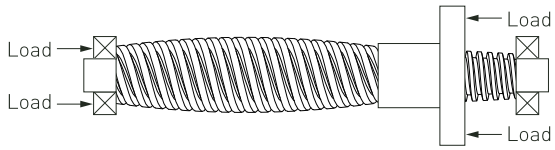
- **TOTAL INDICATED RUNOUT**

  Total indicated runout refers to the total rotational deviation measured around the screw centerline. Runout may affect system vibration, noise, and positioning accuracy.

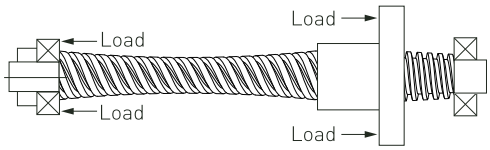
Technology Overview

- **VIBRATION AND NOISE**
  Resonance in hybrid stepper motors typically occurs around the 200 PPS operating range.
  Microstepping control is effective in reducing vibration and audible noise within this range.
- **STATIC LOAD**
  Maximum allowable thrust load that can be applied to a stationary screw, including shock loading.
- **DYNAMIC LOAD**
  Maximum recommended thrust load that can be continuously applied while the screw is in motion.
- **DRIVER**
  Stepper motors require external drives for operation.
  Most commercial drive products integrate power circuits, logic circuits, switching components, and pulse control functions.
- **HOLDING TORQUE**
  Maximum torque the motor can maintain while stationary with current applied.
- **ROTOR INERTIA**
  Rotational inertia generated during acceleration and deceleration.
- **TRAVEL PER STEP**
  Linear travel distance generated during one full motor step.
- **TEMPERATURE RISE**
  Increase in motor temperature during operation.
- **STEP RESPONSE**
  Time required for the motor to complete one step movement.
- **STEP**
  Basic operating increment of a stepper motor in which the rotor rotates by a fixed angle according to phase commutation.
- **STEP ANGLE**
  Angular displacement generated by one motor step.
- **PULL OUT TORQUE**
  Maximum torque at which the motor can start, stop, and reverse synchronously with input pulses.
- **PULL IN TORQUE**
  Maximum torque at which the motor can start and stop synchronously with input pulses, without the use of acceleration or deceleration.
- **EFFICIENCY**
  The ratio of useful output energy to total input energy of a system.
- **RESOLUTION**
  Minimum incremental linear movement of the actuator output shaft per input pulse.
- **TENSION OR COMPRESSION LOADING**
  A load that tends to stretch the screw is referred to as a tension load,
  while a load that compresses the screw is referred to as a compression load.
  Under compression loading conditions, the screw should be designed with consideration for axial strength against column loading.

Technology Overview

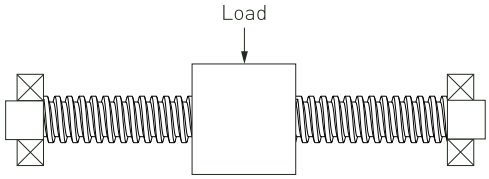


Compression Loading



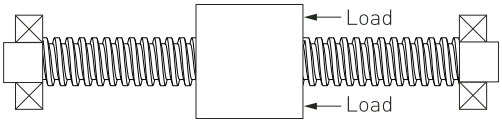
Tension Loading

- **RADIAL LOAD**
  Load applied perpendicular to the screw axis.
  The use of additional support mechanisms such as linear guides is recommended.



Radial Loading
(Avoid or Minimize)

- **AXIAL LOAD**
  Load applied along the centerline direction of the lead screw.



Axial Center Loading
(best)

- **BACKDRIVING**
  Phenomenon in which axial load causes the screw or nut to rotate in the reverse direction.
  Lead screws with efficiencies above 50% generally have a higher tendency to backdrive, while lead screws with efficiencies below 35% are more effective in preventing this condition.
  Smaller lead values can further reduce the possibility of backdriving or free rotation, and vertical systems are generally more susceptible to backdriving due to gravity.

- **TORQUE**
  Motor torque required to drive a lead screw is composed of the following components.
  1. Inertia torque
  2. Drag torque (friction between the nut and screw during operation)
  3. Torque required to move the load

- **LUBRICATION**
  The nut material (Delrin) incorporates self-lubricating properties that minimize the need for additional lubrication. Teflon-coated screw options can further reduce friction and help extend overall system life.

- **END MACHINING OF THE SCREW (Please refer to A-49)**
  Standard metric and inch end machining options are available. Custom end machining specifications are also supported according to customer requirements. Please contact DINGS' for additional information.

Technology Overview

- **FIXITY**
  The performance of a lead screw system, including speed and efficiency, may be affected by how the screw ends are mounted and supported.

Type of End Fixity	Relative Rigidity	Critical Speed Factor	Critical Rod Factor
	Less Rigid	0.32	0.25
	Rigid	1.0	1.0
	More Rigid	1.55	2.0
	Most Rigid	2.24	4.0

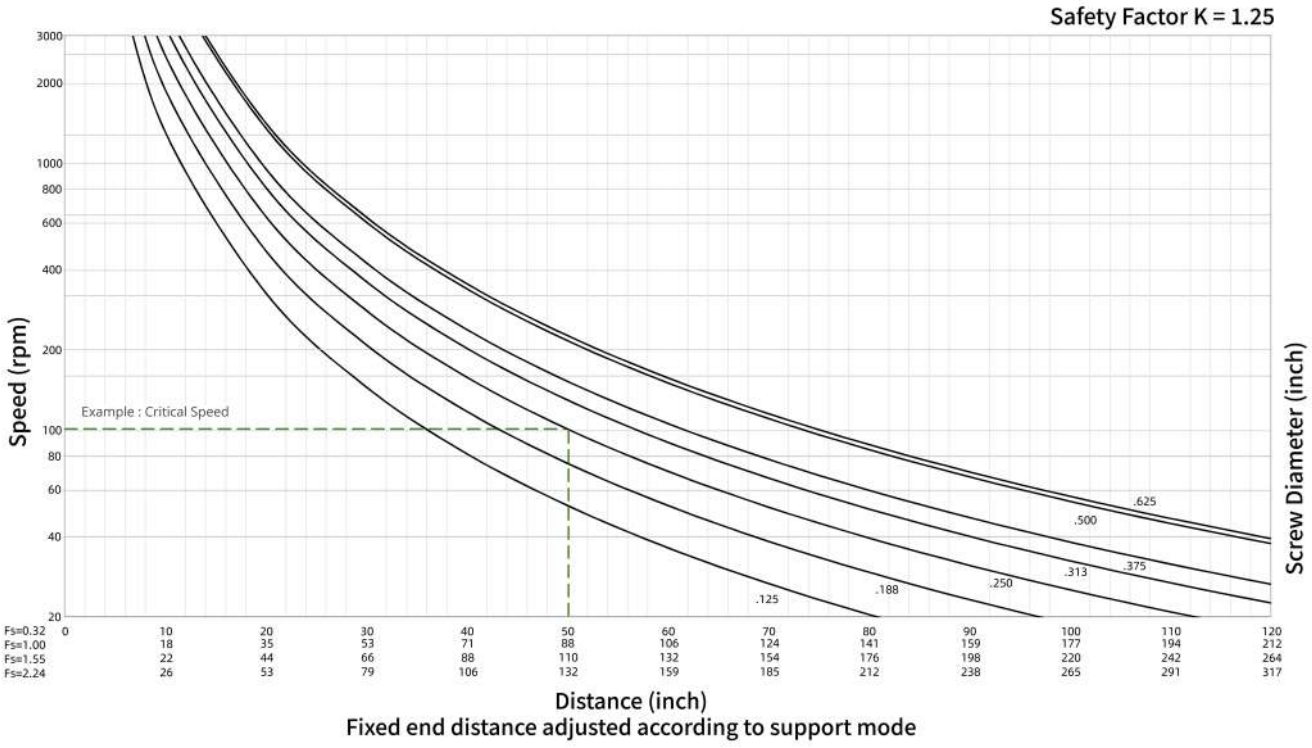
- **COLUMN STRENGTH**
  When a screw is subjected to compression loading, it may exceed its elastic stability limit and become bent or deformed.

- **CRITICAL SPEED**
  Rotational speed at which the screw first reaches its resonance region due to screw deflection or instability. Within this speed range, vibration and unstable system behavior may occur. Critical speed may be affected by the following factors.

  1. Screw lead
  2. Rotational speed
  3. End support condition
  4. Thrust load
  5. Screw diameter
  6. Tension or compression loading

  For example, a screw with a diameter of 19.05 mm (0.75 inch) and a length of 1778 mm (70 inch) has a critical speed of approximately 187 RPM under the conditions of safety factor K = 1.25 and FS = 0.32.

- CRITICAL ROTATION SPEED (RPM) VS. UNSUPPORTED SCREW LENGTH FOR VARIOUS SCREW DIAMETERS (INCH)



- BACKLASH

Relative axial clearance generated between the screw and nut. It is normal for backlash to gradually increase over time with continued use. Backlash compensation can be minimized through the use of anti-backlash nuts, and backlash primarily affects bidirectional positioning accuracy.

General Specifications

All reference to lead screws in this catalog have the following characterisitics

Lead Screw Material	303 Stainless precision cold rolled steel
Screw Coating	Standard lead screws are coated with a thin layer of grease. Teflon coating is optional.
Standard Screw Accuracy (Lead Accuracy)	0.0071 inch / foot (0.18 mm / 300 mm)
Screw Straightness	0.15 mm / 300 mm
Screw Efficiency	From 35% to 85% dependent on lead. Also depends on the usage of an anti backlash nut with screw. The larger lead, higher efficiency of the screw.
Operating Temperature	-20°to 55°C
Storage Temperature	Storage at room temperature with a relative humidity as lower than 75%, clean, well ventilated and free from corrosive gases.
Screw Backlash	Generally around 0.01~0.1 mm
System Backlash	Includes screw, motor, and attached mechanics. This will be the sum of all backlash in customer's motion axis.
Nut Material	POM/PBT with Self-Lubricating material.
Wear Life of Screw and Nut	Depending on the load, speed, and environment, it is typically millions of cycles.

NOTE: DINGS' linear system are manufactured from high quality materials. Because of the variable effects of friction, lubrication and cleanliness, an exact life cannot be predicted for a given application.

TEST CONDITION

Testing Voltage: 48Vdc, Driver Model: DS-OLS4-FPD bipolar, chopper driver at rated current (rms).
Motor thrust may vary depending on voltage and driver conditions. 50% thrust margin is recommended.

Size 24 (60mm) Series

Size 24 [60mm] Stepper Lead Screw Linear Actuator provides high performance, a longer working cycle, and is capable of 1050N.

- **Warnings**

1. Do not dismantle the motor in any case.
2. Do not apply radial force to the screw. Do not lift, hang, push or pull the screw during usage or transport.
3. Do not add any lubrication to the nut and screw. Protect the grease from being wiped off and no other grease shall be used except those from DINGS'.
4. Measures should be taken to protect the lead screw surface from dust.
5. Do not drop the motor or screw.
6. Do not apply force or tension to the lead wire.
7. When using a chopper driver, please set the current (RMS) to the rated current of the motor. Overdriving is not recommended, as it could overheat the motor and cause the winding insulation to melt/burn.
8. Operate in ambient temperatures between -20°C to +55°C.
9. To maximize life of the system, actual load should be lower than 50% of the recommended load limit. Avoid hitting mechanical hard stops of the system.
10. Storage at room temperature with a relative humidity as lower than 75%, clean, well ventilated and free from corrosive gases.

- **Typical Electrical Connection**

Troubleshooting

Common Failure	Cause Analysis	Processing Methods
Motor not Running	Poor Connection	Re-connection
	Driver Alarm	Power Off and Re-boot after checking
	Actuator Stuck	Remove load, ensure actuator operates smoothly without load
	Motor winding or insulation damaged	Contact DINGS' for maintenance
Abnormal Operation After Starting Up	Resonance	Enhance microsteps to change travel speed
	Lead Screw Bend	Contact DINGS' for maintenance
	Phase Loss	Contact DINGS' for maintenance
Vibration, Noise	Low-Frequency Vibration	Adjust driver microsteps to change travel speed to avoid resonance
	Phase Loss	Contact DINGS' for maintenance
Abnormal Heating	Over Current	Regulate current value to achieve proper rating range
	Over Supply-voltage	Reduce supply-voltage
	Extended period of holding	The holding current should be halved or adjusted to smaller value
Step Loss	Overload on the Load Side	Reduce load or re-selection
	No frequency raising or lowering when programming	When motor starts, it needs to be accelerated from low to high
Insufficient Thrust	Driver Failure	Repair or replace driver
	Load is too high	Reduce load or resize actuator
	Damaged Nut	Contact DINGS' for maintenance
Lead Screw Bend or Runout at the End of Lead Screw	Damage in Transportation or Improper Installation or Improper Operation	Contact DINGS' for maintenance
Other Failures		Contact DINGS' for maintenance

Stepper Ball Screw Linear Actuator

DINGS' External Ball Screw Linear Actuators come in 6 standard sizes, from 14mm to 57mm. From 0.005mm/step to 0.1mm/step, with variety of resolution options available. Maximum thrust can reach 1600N.
Encoder options available.

Installation Guide

Precaution of handling and operation

This product integrates the motor and screw together, and repair is not possible for either of these components. Please handle with care to avoid damage to the assembly.

Precaution for operation

1. Before use, please read instruction manuals and follow the precautions below.
2. Do not hit or drop the shaft, do not apply Axial load or radial load exceeding specifications, it may cause malfunction.
3. Before use, please check that the product has no defect, and product is the same as your order.
4. Do not disassemble each component, dust may get inside the product. It may deteriorate accuracy.
5. Please prevent contamination from dust or swarf. Dust or swarf may cause damage to ball screw, Which lead to deteriorating the function.
6. Lubrication is required under the ball screw operation. Lubrication condition should be checked every 2-3 months. If grease is contaminated, remove old grease and replace with new one.
7. Do not use the motor exceeding our specification in load or speed.
8. Allowing ball screw nut to over-run may result in malfunctioning due to balls escaping, damage to recycling parts, and indentation on the raceways. Therefore ball screw nut must never be allowed to over-run. If over- running occurs, contact us for an inspection with charge.
9. Do not hold the motor lead wire. It is for fixation, do not use it as movement.
10. The motor torque and speed characteristics may vary from the specifications, depending on the load conditions or Driver used. Please adjust as appropriate.
11. The motor has a resonant point within the specifications. Please avoid it when in use.

Precaution for safety

1. If abnormal odor,noise,smoke,overheating,or vibration occurs,stop operation immediately and turn the power off.
2. Do not use the exceeding rated current.
3. The motor may overheat depending on the load condition or Driver used. Make sure that the motor surface temperature dose not exceed 80°C when in use.
4. Check the wire connection type,Drive system, and phase sequence. Inappropriate connection leads to malfunction.
5. Do not bend ,pull or pinch the motor lead wire.
6. Do not touch moving parts during operation.
7. Disconnect from the controller before performing dielectric withstanding voltage test of the motor or Insulation test.
8. Please switch off the Driver ,when inspection or maintenance.

Operating environment

1. Operating environment should be 0-40°C in temperature and 20-80%RH in humidity. Do not use it under dew condensation, corrosive gas or inflammable gas environment.
2. Do not use it under strong electric field, strong magnetic field.
3. Please prevent from swarf, oil mist, cutting fluid, water/moisture, salt spray, organic solvent and other contamination.
4. The motor can not be used under the vibration, impact, vacuum, and other special environment.

Ball screw maintenance

1. Ball screw pair protection device
   (1) The use of the ball screw in the use of the process, is strictly prohibited dust or dirt entering, and therefore must be equipped with protective device.
   (2) The ball screw pair is exposed on the machine tool, and a closed protective cover shall be adopted, such as the use of a coil spring steel tape sleeve, a telescopic sleeve and a folding sleeve, etc.. When you install, connect one end of the shield to the side of the ball nut. The other end is fixed on the supporting seat of the ball screw.
   (3) The position of the ball screw is located in a position, and the sealing ring is used to protect the ball screw. Sealing ring is arranged on both ends of the nut. Contact and non contact type two sealing ring.

2. Lubrication of Ball screw
   (1) The ball screw pair is usually used for two kinds of lubricants, lithium based grease and the main shaft oil. Lubricating grease generally and in the thread rolling and nut shell space, spindle oil through the shell of an oil hole injection nut of the space.
   (2) Use of the process, every half a year to replace the grease, clean the old grease, coated with new grease. The ball screw pair lubricated with spindle oil can be oiled once before each operation of the machine.

PM Stepper Linear Actuator

DINGS' Permanent Magnet (PM) Stepper Linear Actuators are available in sizes of 15, 20, 25, 36, and 46 mm.

The 15 mm and 46 mm series are available in External and Kaptive types, while the 20, 25, and 36 mm series also include Non-captive.

They offer a wide range of lead options, from 0.025 mm/step to 0.3333 mm/step, with a maximum thrust of up to 115 N. This cost-effective solution delivers excellent performance while utilizing high-quality lead screws and Delrin plastic nuts for reliable operation.

Typical applications include medical equipment, laboratory devices, microscopes, testing equipment, and measurement systems.

B Hybrid Rotary Stepper Motor

DINGS' hybrid stepper motors offer high precision and high reliability, and are designed to flexibly support a wide range of motion control applications. The lineup includes both 2-phase and 5-phase models, offering diverse options to meet various customer requirements.

The 2-phase hybrid stepper motors are known for their robust performance, versatility, and cost-effectiveness, making them suitable for a wide variety of general automation tasks.

5-phase hybrid stepper motors provide smoother operation, lower vibration, and higher positioning accuracy, making them suitable for high-precision applications.

XXX = Rated current ×100 (A)

⑥ Number of Wires (3,4,5,6,8)

⑦ Shaft Configuration

A = Single shaft

B = Dual shaft

* Shaft dimension and D-Cut customization, please contact DINGS'

⑧ Wiring Method

L = Lead wire

T = Pin connector

C = Cable

* If customer has special requirement for connector and cable, please inform DINGS'

⑨ Option

GR = Planetary gearbox ready

BR = Brake ready

ER = Encoder ready

PG = Planetary gearbox

2-Phase Hybrid Rotary Stepper Motor

DINGS' provides 8 different sizes of hybrid stepper motors from 14 mm to 86 mm. Each size has multiple stack lengths. Single or dual shaft is standard but customized shaft options are also available. DINGS' can customize the entire range of hybrid stepper motors as encoder ready for general motion solution providers and also encoder housing, special machining of front and rear shafts, special cables, wire harness assemblies and other solutions are available. According to customer's requirements, we can integrate various gearboxes, encoders, connectors and cables too. In addition, various ratio of planetary gearboxes, DINGS' standard encoders and power-off brakes (NEMA 11, 14, 17, 23 and 24), IP Protection is optional.

5-Phase Hybrid Rotary Stepper Motor

DINGS' 5-phase stepper motors deliver exceptional precision and low vibration, outperforming conventional 2-phase stepper motors with superior resolution and significantly reduced vibration and resonance. Featuring a 0.72° step angle, they enable smooth motion and highly accurate positioning, making them ideal for applications where precise movement is critical.

Furthermore, their stable low-speed performance and high torque characteristics make them well-suited for a wide range of applications, from precision equipment to industrial automation systems. These advantages ensure reliable operation across various demanding environments, supporting both performance and productivity.

C Hollow Shaft Stepper Motor

DINGS' provides 8 different sizes of Hollow shaft stepper motors from 14mm to 86mm.

Each size has multiple stack lengths. Single or dual shaft is standard but customized shaft options are also available. In addition hollow shaft encoders are available.

Customers are able to use hollow shaft motor to let something go thru hollow shaft like suction valve, cables or pumps especially pick & place application, electronics picker module or other applications.

Hollow shaft motor enables customers to design this kind of pick-up module in very compact design and small size of hollow steppers for example NEMA 6, NEMA8 or NEMA11, it can reduce total weight of picker module since light weight of motors.

For better positioning, lots of customers require closed loop function of hollow shaft motors and DINGS' has various hollow shaft type of encoders so it can be very helpful to realize light weight of motor and encoder package for higher accuracy of positioning.

TEST CONDITION

Tested at 24VDC with DS-OLS8-FRS4 bipolar chopper drive at rated current (RMS).
Motor torque varies with voltage and driver conditions. A 50% safety margin is recommended.

Size 8 (20mm) Series

The size 8 [20mm] Hollow Shaft Stepper Motor has Max. 0.02N·m of holding torque.
For special windings or shaft customization,
hollow-shaft encoder assembly options are also available,
please contact DINGS' for further information.

D Brushed DC Motor

DINGS' Brushed DC motors have low mechanical loss, high power conversion efficiency but relatively save energy.

The speed of Brushed DC motor can quickly respond to change of voltage and meet the requirements of high speed and high precision control.

Brushed DC motor's torque is proportional to the current, it has very high starting performance.

DINGS' Brushed DC motors can be designed by Ferrite, Aluminium, Nickel Cobalt, Rare Earth magnet or Permanent Magnet. Also DINGS' can adopt two different brushes as Graphite or Metal Graphite.

In addition, DINGS' can customize Brushed DC motors in various ways with gearbox, encoder or DINGS' also can design Brush DC linear actuators for wide applications.

E Brushed Coreless DC Motor

DINGS' offers a lineup of Brushed Coreless DC motors in five frame sizes: 8 mm, 10 mm, 16 mm, 25 mm, and 40 mm.

Featuring a coreless rotor design, these motors deliver compact and lightweight construction, fast response, and high efficiency.

The optimized moment-of-inertia design significantly enhances dynamic performance, making them suitable for precision-control applications such as medical devices, robotics, and advanced measurement equipment.

With stable operation, low noise, strong starting torque, and agile control response, they are an ideal choice for high-performance miniature drive systems.

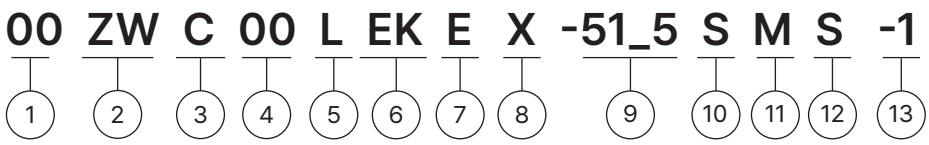
F Brushless DC Motor

DINGS' provides 9 different sizes of Brushless DC motors have several advantages, including start and speed regulation, higher power density and over load capacity.

From 16mm to 110mm with power output ranging from 9.2W to 710W, DINGS' provides 9 frame sizes and according customer's requirements, higher capacity of Brushless DC Motors can be customized.

Part Number Construction



① Motor Size

Motor Size(mm)	16	22	28	36	42	57	60	86	110

② Product Name

ZW = Slotted Brushless DC Motor

③ Motor Shape

C = Circular Type

S = Square Type

④ Motor Length

Unit : mm

When the length involves decimal points, use "_" instead

⑤ Motor Casing

L = Aluminum

T = Stainless steel / Iron

X = No housing

⑥ Option

EKX = Encoder (X = Encoder Resolution)

B = Brake

GX= Gearbox (X = Gear Ratio)

Note: When selecting multiple options, please arrange them in alphabetical order (e.g., "BEG").

⑦ Structure

E = External type

N = Non-Captive type

C = Electric Cylinder (Captive) type

K = Kaptive type

⑧ Lead Screw Code

Please refer to the lead screw code selection table

⑨ Screw Length / Stroke

Kaptive = stroke distance

Non-captive = total length of screw

External = screw extension length from the mounting flange

⑩ Screw Surface Treatment

T = Teflon coating

S = Standard (No teflon coating)

⑪ End Machining

M = Metric

U = UNC

S = Smooth

C = Customization

N = None

⑫ Nut Style

S = Standard flange nut

A = Anti-backlash nut

C = Customized nut

⑬ Customer Sequence Number

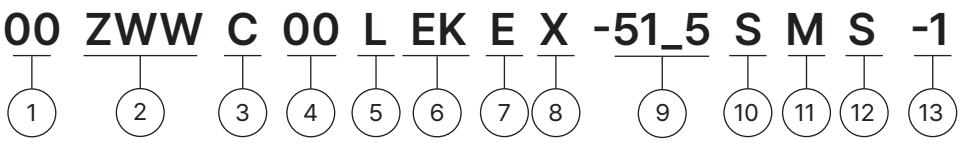
G Slotless Brushless DC Motor

DINGS' Slotless Brushless DC Motors can avoid the pulsation of air gap magnetic induction caused by uneven magnetic resistance in the teeth.

It can eliminate the pulse loss in the armature core and the surface loss on the main pole surface.

Slotless Brushless DC Motor has high durability, low electrical noise and high efficiency. Maximum efficiency of motor reaches 91% and this motor is suitable for the servo system which needs quick movement and high power.

Part Number Construction



① Motor Size

Motor Size(mm)	6	8	10	12	13	14	16	22	28	30	36	42

② Product Name

ZWW = Slotless Brushless DC Motor

③ Motor Shape

C = Circular Type

S = Square Type

④ Motor Length

Unit : mm

When the length involves decimal points, use "_" instead

⑤ Motor Casing

L = Aluminum

T = Stainless steel / Iron

X = No housing

⑥ Option

EKX = Encoder (X = Encoder Resolution)

B = Brake

GX= Gearbox (X = Gear Ratio)

Note: When selecting multiple options, please arrange them in alphabetical order (e.g., "BEG").

⑦ Structure

E = External type

N = Non-Captive type

C = Electric Cylinder (Captive) type

K = Kaptive type

⑧ Lead Screw Code

Please refer to lead screw code selection table

⑨ Screw Length / Stroke

Kaptive = stroke distance

Non-captive = total length of screw

External = screw extension length from the mounting flange

⑩ Screw Surface Treatment

T = Teflon coating

S = Standard (No teflon coating)

⑪ End Machining

M = Metric

U = UNC

S = Smooth

C = Customization

N = None

⑫ Nut Style

S = Standard flange nut

A = Anti-backlash nut

C = Customized nut

H Frameless Motor

Frameless motors are based on a modular stator and rotor design, delivering high torque density through optimized slot ratios.

The rotor features a large inner bore, while the stator is designed for direct embedded installation, enabling flexible and customized system design, including mounting structures and cooling solutions. An optimized slot-pole combination effectively reduces cogging torque, ensuring smooth and stable operation.

With a compact and highly integrated structure, frameless motors are ideal for applications requiring both high performance and design flexibility.

I Linear Module

Based on our company's platform product high-precision screw stepper motor, combined with linear guide rails, we have designed DLM series, LR-DLM series, DSM series, DSLM series and DWM series simple modules.

The product has a compact structure and high positioning accuracy, achieving mechanical miniaturization for customers. Both modules have a variety of lead screw and stroke options, providing accessories such as encoders and power brakes (refer to optional accessories for sliding screw linear actuators), as well as special customized products.

DLM / LR-DLM Series

Based on DINGS' motion platform technologies, the DLM and LR-DLM series combine high-precision lead screw linear actuators with self-developed linear module structures to provide compact and reliable linear motion solutions.

The DLM series and LR-DLM series offer high precision, a wide range of stroke options and lead-based customization. These linear modules can provide customers with integrated, customized solutions.

Part Number	DLM100-8E2205G4-L-001
Description	LR DLM Linear Module 100mm Stroke NEMA 8 External Linear Actuator 2-phase / 1.8° Stepper Double Stack 0.5A / Phase G Lead (0.0787" or 2.0mm) 4-wire leads LR DLM Serial Number 001

Size 14mm DLM

Based on DINGS' high-precision lead screw linear actuator platform and self-developed compact linear module structure, the DLM 14mm series provides compact, reliable, and high-precision linear motion solutions.

The DLM 14mm series offers a wide range of stroke and lead options with extensive customization capabilities, enabling integrated customized solutions for various applications.

Size 42mm DLM / LR-DLM

Based on DINGS' high-precision lead screw linear actuator platform and self-developed compact linear module structure, the DLM and LR-DLM 42mm series provide compact, reliable, and high-precision linear motion solutions.

The DLM and LR-DLM 42mm series offer a wide range of stroke and lead options with extensive customization capabilities, enabling integrated customized solutions for various applications.

Size 57mm DLM / LR-DLM

Based on DINGS' high-precision lead screw linear actuator platform and self-developed compact linear module structure, the DLM and LR-DLM 57mm series provide compact, reliable, and high-precision linear motion solutions.

The DLM and LR-DLM 57mm series offer a wide range of stroke and lead options with extensive customization capabilities, enabling integrated customized solutions for various applications.

DSM Series

The DSM series of precise and compact linear modules combines all major aspects of the precise linear Motor system into a small and economical structure, including external drive linear actuators, precise screw rods and high-precision linear guides.

The DSM series linear modules are available in NEMA 6, 8, 11, 14, and 17 motor sizes. There are over 80 types of screw rods available for matching, with a range of lead options ranging from 0.3 to 25.4mm.

DSLM Series

DINGS' DSLM Series is available in NEMA size 14, 17 and 23 offers excellent linear speed and precise positioning performance.

Using spline slide rail as linear guide, it maximizes travel distance as max. 900mm stroke and ensures stable slider movement.

The DSLM series offers Teflon coating for a longer life cycle and employs a fixed half-nut structure to drive the slide, providing stable operation.

Part Number	DSLM183-14E2110R4-001
Description	DSLM Linear Module 183mm Stroke NEMA 14 External Linear Actuator 2-phase / 1.8° Stepper Single Stack 1.0A / Phase R Lead (0.2" or 5.08mm) 4-wire leads Serial Number 001

As the DSLM module uses sliding friction, please check the standard linear thrust data and allow a 1–2 kg margin in product selection.

Size 35mm DSLM

DINGS' DSLM Series in NEMA Size 14 [35mm] offers excellent linear speed and precise positioning performance.

Using spline slide rail as linear guide, it maximizes travel distance as max. 900mm stroke and ensures stable slider movement.

The DSLM series offers Teflon coating for a longer life cycle and employs a fixed half-nut structure to drive the slide, providing stable operation.

Size 42mm DSLM

DINGS' DSLM Series in NEMA Size 17 [42mm] offers excellent linear speed and precise positioning performance.

Using spline slide rail as linear guide, it maximizes travel distance as max. 900mm stroke and ensures stable slider movement.

The DSLM series offers Teflon coating for a longer life cycle and employs a fixed half-nut structure to drive the slide, providing stable operation.

Size 57mm DSLM

DINGS' DSLM Series in NEMA Size 23 [57mm] offers excellent linear speed and precise positioning performance.

Using spline slide rail as linear guide, it maximizes travel distance as max. 900mm stroke and ensures stable slider movement.

The DSLM series offers Teflon coating for a longer life cycle and employs a fixed half-nut structure to drive the slide, providing stable operation.

DWM Series

The DWM series is designed and updated based on the DLM series of DINGS' simple modules.

It features newly added guide rails and limit designs, making the structure more stable and suitable for high-precision and high-load scenarios. It offers customers diversified and integrated solutions.

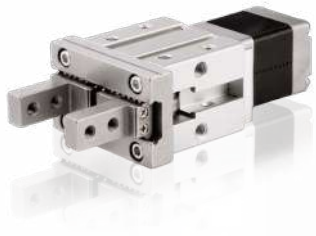
J Gripper

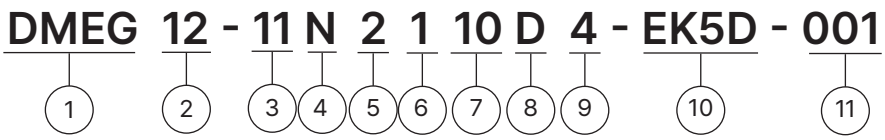
Based on our own design and development of through motor foundation, the stroke of 6mm and 12mm Gripper can be selected.

The structure is compact and simple, which can replace the pneumatic clamping claw, reduce the operation noise, and effectively improve the accuracy.

High resolution of encoder based closed loop torque control Motion Controller is optional.



Part Number Construction



① Product Name
Electric Gripper

② Stroke (mm)
12 = 12 mm

③ Motor Size

Motor Size (mm)	20	28	35	42
Motor Size (NEMA)	8	11	14	17

④ Motor Type
N = Non-Captive type

⑤ Motor Step Angle
2 = 2-phase, 1.8° step angle

⑥ Motor Length
1 = Single stack
2 = Double stack

⑦ Rated Current / Phase
XX = X.X (A) / Phase

⑧ Lead Screw Code
Please refer to the lead screw code selection table

⑨ Number of Lead Wires
4 = 4-wire leads
6 = 6-wire leads

⑩ Option
EKX = Encoder [X = Encoder Resolution]
ER = Encoder Ready

⑪ Customer Sequence Number

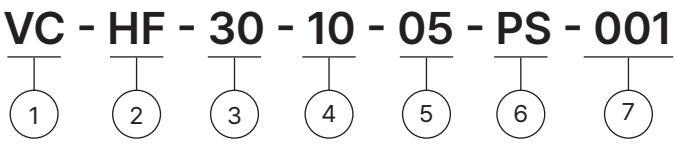
K Voice Coil Motor / Voice Coil Actuator

DINGS' offers a wide range of Voice Coil Motor (VCM) and Voice Coil Actuator (VCA) solutions, including cylindrical and flat-type Voice Coil Motors, covering various diameters and performance requirements.

Based on standardized motor diameters, DINGS' provides flexible stroke customization to meet specific application needs. Unlike many competitors that offer only fixed stroke options, DINGS' can customize stroke lengths according to customer requirements.

DINGS' Voice Coil solutions deliver low backlash, fast response, and high precision when combined with dedicated drive solutions. For applications requiring enhanced positioning accuracy, linear scales can also be integrated to provide precise feedback and closed-loop control.

Part Number Construction



① Motor Type
- VC = Voice Coil Motor
- VCXR = Flat-Type Voice Coil Motor

② Force Version
- None = Standard Series
- HF = High Force Series

③ Frame Size
- 30 = 30mm

④ Stroke
- 10 = 10mm Stroke
- (For custom stroke sizes, please contact DINGS')

⑤ Continuous Force
- 05 = 5N Continuous Force
- (For continuous force, refer to the thrust curve. For custom force requirements, please contact DINGS')

⑥ Position Sensor
- None = Without position sensor
- PS = With position sensor

⑦ Customer Sequence Number
- External dimensions, mounting dimensions, and appearance can be customized as required.

L Motion Controller

DINGS' offers various motion controllers includes drivers and programmable controllers with our hybrid stepper linear actuators, rotary stepper, hollow shaft motors, brushless DC motors and voice coil motors as one package.

From step and direction microstepping driver but also RS485, CANopen and EtherCAT supported open loop / closed loop of motion controllers are available.

DINGS' motion controllers are very specialized for all types of linear actuators includes External, Non-Captive, Captive and Kaptive actuators with encoder or without encoder. These stepper electronics also can be available for regular rotary steppers and also for hollow shaft motors too. Both open and closed loop controls are available.

For Brushless DC motor, DINGS' provides standard and Mini type of motion controllers via CANopen and EtherCAT field bus. These combination can be low-voltage DC Servo which can be alternatives for conventional closed loop stepping control system and AC Servo for certain applications. Also offers dedicated control drive solutions for Voice Coil Motors (VCMs). These solutions support RS-485 communication, analog frequency control, closed-loop position control, and Hall sensor feedback, making them ideal for semiconductor, optical, medical, and precision automation equipment requiring high-speed response and high-precision positioning performance.

Standalone Stepper Motor Drivers

DS-OLS2-FPD Driver

Features

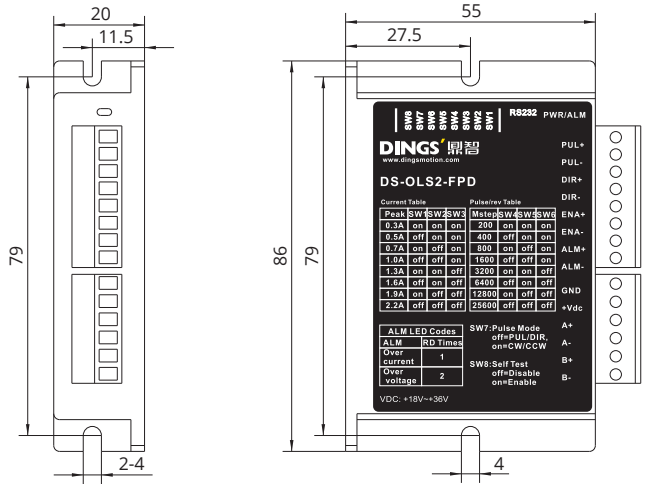
1. 32-bit DSP technology
2. Anti-resonance for optimal torque and quiet, low-heat operation
3. Automatic tuning at power-on, selectable via DIP switch
4. Precision current control to minimize motor heating
5. Supports 1 pulse, 2 pulse control, selectable via DIP switch
6. Drives 4,6,8-wire 2-phase stepper motor
7. Opto-isolated input
8. Maximum pulse input frequency: 200kHz
9. Output current adjustable from 0.3 to 2.2A (8 levels) via DIP switch
10. Over-voltage and over-current protections
11. External alarm output, maximum output current 100mA, 24VDC withstand voltage

Specification

Applicable motor		2-phase hybrid stepper motor, max supported current : 2.2A (max.)
Power supply		24 - 36VDC
Output current		0.3A - 2.2A / phase (max.)
Driving method		Full-bridge bipolar PWM drive
Control method		Pulse-direction control
Encoder support		No
Input signal	Pulse signal	Opto-isolated input: H = 3.5–26V, L = 0–0.8V, input current 6–15mA, max. response frequency 200kHz
	Direction signal	
	Enable signal	
Output signal	Alarm output	Opto-isolated output: max. voltage 30VDC, max. current 50mA
Size (excluding connector)		86 × 55 × 20 mm
Weight (excluding connector)		Approx. 90 g
Operating environment	Environment	Avoid dust, oil mist and corrosive gas
	Humidity	< 85% RH, no condensation
	Temperature	0 ~ 40°C
	Cooling	Install in a ventilated environment

Installation (unit : mm)

1. Consider terminal size and cooling space during installation.
2. Recommended temperatures: under 60°C (driver), under 80°C (motor).
3. Install the driver vertically for natural cooling. Add a fan if needed to maintain stable operation.



Standalone Stepper Motor Drivers

DS-OLS22-FPD Open-Loop Control - Pulse/Direction type

Features

1. Input power : DC 12V - 48V
2. 8 Output current settings
3. Constant current bipolar microstepping drive
4. Supports 16 micro-step resolutions via DIP switch
5. Supports 1 pulse, 2 pulse control
6. Opto-isolated input
7. Motor short circuit protection
8. Compact design, low noise, low vibration
9. Enable signal function supported

Specification

Applicable motor		2-phase hybrid stepper motor, max supported current : 3A (max.)

DS-OLS4-FPD Open-Loop Control - Pulse/Direction type

Features

1. 32-bit DSP technology
2. Anti-resonance for optimal torque and quiet, low-heat operation
3. Built-in high-resolution microstepping, selectable via DIP switch
4. Automatic tuning at power-on, selectable via DIP switch
5. Precision current control to minimize motor heating
6. Automatic idle current reduction to 50% , SW4 selection
7. Supports 1 pulse, 2 pulse control, selectable via DIP switch
8. Drives 4,6,8-wire 2-phase stepper motor
9. Opto-isolated input
10. Maximum pulse input frequency: 200kHz
11. 4-bit DIP switch for 16-level microstepping resolution
12. Over-voltage and over-current protections
13. External alarm output, maximum output current 100mA, 24VDC withstand voltage

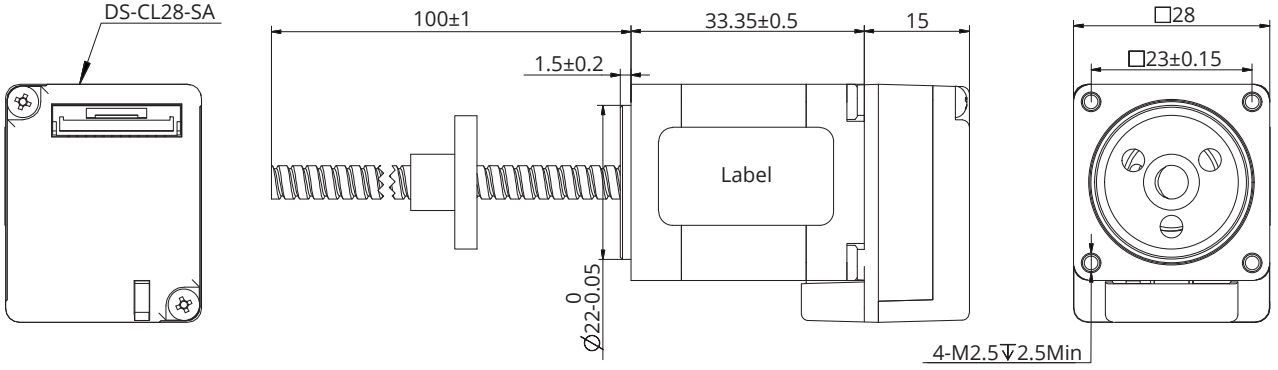
Applicable motor		2-phase hybrid stepper motor, max supported current : 1.0A (max.)
Power supply		24VDC ± 10 %
Output current		0.1A - 1.0A / phase (max.)
Driving method		Full-bridge bipolar PWM drive
Control method		RS485 communication control
Encoder support		Built-in INC encoder
Input signal	4 general inputs	Opto-isolated input : 24VDC
Operating environment	Environment	Avoid dust, oil mist and corrosive gas
	Humidity	< 85% RH, no condensation
	Temperature	0 ~ 40°C
	Cooling	Install in a ventilated environment

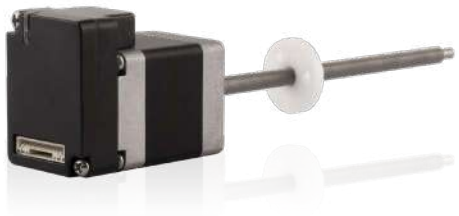
Installation (unit : mm)



Integrated Stepper Motor Drivers

DS-CL28-IRS4(IPD) Integrated Open / Closed Loop

Features

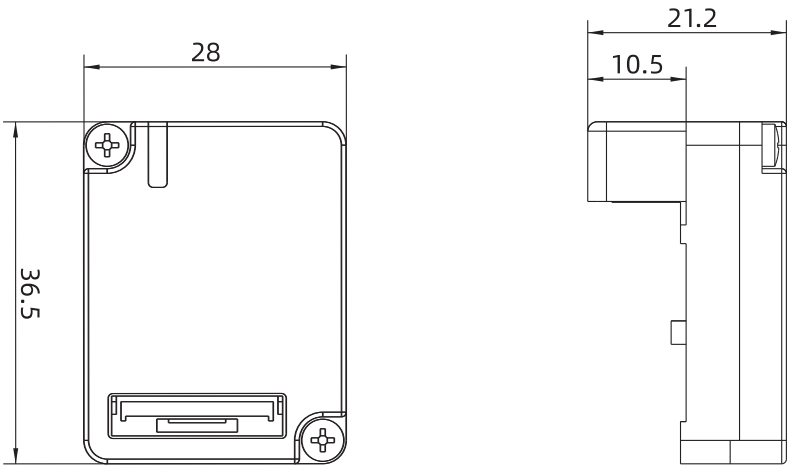


1. Max. frequency response: 500KHz (duty cycle 50%)
2. Supports pulse mode, internal pulse mode, I/O control, position pressing mode, and torque mode
3. 3 Input signals : pulse, direction, enable (optocoupler isolation, 5V signal drive, current limiting resistor required for exceeding 5V)
4. 1 output signal : alarm (optocoupler isolation, output when there is no alarm)
5. Protection functions : overcurrent, overvoltage, undervoltage, motor phase loss

Specification

Applicable motor		2-phase hybrid stepper motor, max supported current : 1.5A (max.)
Power supply		24VDC
Output current		0.5A - 1.5A / phase (max.)
Driving method		Full-bridge bipolar PWM drive
Control method		RS485 communication control
Encoder support		Built-in INC encoder
Input signal	3 high-speed inputs	Opto-isolated input: H = 3.5–5V, L = 0–0.8V, 6–15mA, max. 500kHz
Output signal	Alarm output	Opto-isolated output: max. voltage 30VDC, max. current 10mA
Operating environment	Environment	Avoid dust, oil mist and corrosive gas
	Humidity	< 85% RH, no condensation
	Temperature	0 ~ 40°C
	Cooling	Install in a ventilated environment

Installation (unit : mm)



Integrated Stepper Motor Drivers

DS-CL42-SA Integrated Closed Loop - RS485

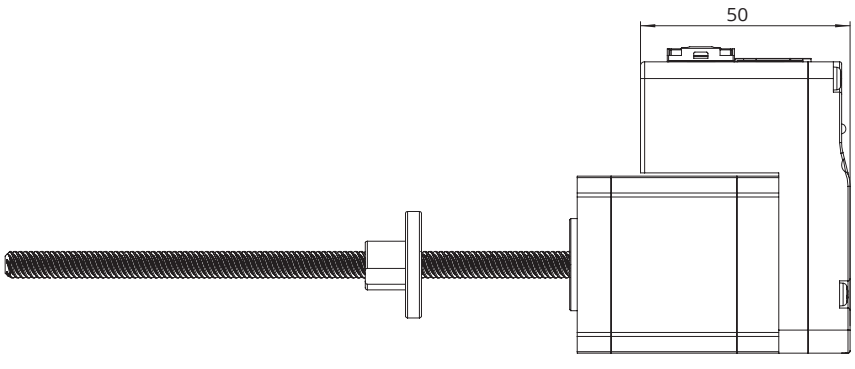
Features

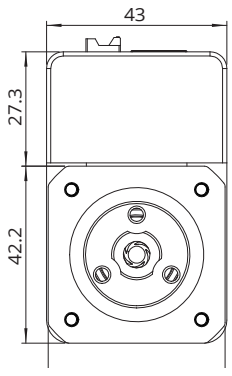
1. Input power : DC 24V ± 10%
2. Rated output current : 0–1.2A/phase (max.)
3. Integrated 42 step closed-loop control system,
   RS485 communication interface supports MODBUS-RTU communication protocol
4. 7 inputs and 3 outputs

Specification

Applicable motor		2-phase hybrid stepper motor, max supported current : 1.2A (max.)
Power supply		24VDC ± 10 %
Output current		0.1A - 1.2A / phase (max.)
Driving method		Full-bridge bipolar PWM drive
Control method		RS485 communication control
Encoder support		Built-in INC encoder
Input signal	7 general inputs	Opto-isolated input : 24VDC
Output signal	3 general outputs	Opto-isolated output : 24VDC
	1 brake output	24VDC
Operating environment	Environment	Avoid dust, oil mist and corrosive gas
	Humidity	< 85% RH, no condensation
	Temperature	0 ~ 40°C
	Cooling	Install in a ventilated environment

Installation (unit : mm)





Customization Options

Coreless Push Rod Actuator

- **Features**

1. Lightweight design based on a coreless motor, featuring low inertia and fast response, enabling millisecond-level rapid start, braking, and reversal.
2. Smooth operation even at low speeds, without vibration or stalling, suitable for precision motion control.
3. Integrated high-precision lead screw and closed-loop control system to meet precise positioning requirements.
4. High power density design effectively balances compact size and high thrust, with a maximum thrust of up to 1500 N.

- **Specification**

DC Servo Motor

Features

1. Compact size ideal for tight spaces
2. Optimized rotor and pole pairs design reduces cogging torque for smoother motion
3. Segmented stator improves heat dissipation and reduces eddy current loss; vacuum epoxy potting enhances insulation
4. High-resolution encoder enables precise control and retains position after power loss

Customization Options

Outer Rotor Motor

- Features

1. Compact size ideal for tight spaces
2. Compact design with high output torque using high-performance magnetic materials
3. Wide speed range and stable low-speed operation with multi-slot stator
4. Outer rotor design reduces cogging torque, noise, and vibration

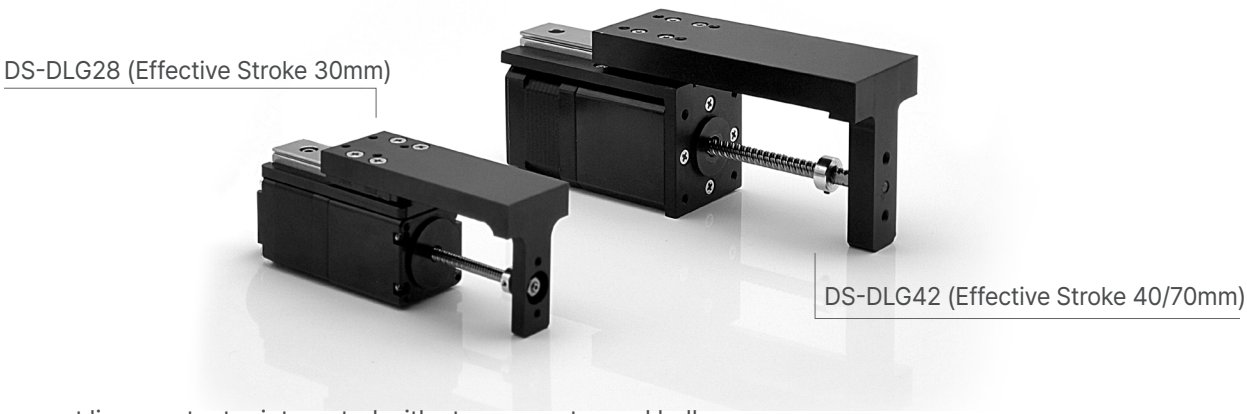
Customization Options

IP54 Rating Protection Solution

1. Epoxy resin Primer coating and blue polyurethane finish with thickness of 0.1 – 0.15 mm
2. Coated surface can withstand up to 48 hours of salt spray
3. Wiring connections use industrial threaded connector, capable of anti-vibration and anti-squeezing, obtaining protection class of IP 54

Customization Options

DLG/DRS Electric Slide Ball Screw Linear Actuator



1. Compact linear actuator integrated with stepper motor and ball screw
2. Direct integration structure without coupling, higher efficiency and precision
3. It enables equipment design compact and reduce the number of parts and assembly process
4. Compared with trapezoidal screw type, it can achieve high precision, bigger thrust and longer life cycle

Customization Options

Brushless DC Blower Motor

1. Potentiometer speed control
2. Analog speed command signal. Fan speed is proportional to the analog command signal, and the range of the command signal is 0 - 5 V
3. Digital speed command signal (PWM). Fan speed is proportional to the PWM duty cycle signal, the command signal is 5V, 200Hz, the adjustment range is 10% - 90%, and it stops when it is lower than 10%.
4. High wind pressure, high flow rate, low noise, long life, small size, customizable.

Customization Options

New energy main drive motor

1. Equipped with supporting electronic control, it has strong load and overload capacity, small starting torque and can meet multiple speed regulation requirements
2. DINGS' Established R&D and production line dedicated for permanent magnet synchronous motors with specialized development capabilities
3. Can meet various voltage customization requirements (72V / 96V / 115V / 320V / 350V)
